

THE ONLY COW THAT MAKES
OAT MILK TOO.

hey **MILKY**

heylo

WHY MILKY?

Milky is an automatic induction milk frothing system. It is designed to ensure consistent quality, reduce waste, and simplify operations behind the counter.

HOW DOES IT WORK?

Milky draws milk or plant based beverages directly from the refrigerator, froths and heats them using induction technology, and dispenses the selected texture straight into the pitcher.

The key advantage lies in parallel workflow. While Milky heats and froths the milk automatically, the barista does not need to supervise the process and can focus on other tasks such as extracting espresso, preparing the next order, or serving customers. Unlike a traditional steam wand, which requires constant attention, Milky allows milk preparation to run independently alongside the rest of the workflow.

A 120 ml cappuccino is ready in 18 seconds.

WHAT QUALITY DOES IT DELIVER?

- Over 100 texture levels
- Hot and cold functions
- Compatible with dairy milk and plant based beverages
- Automatic calibration with the option for manual adjustment
- Less then 1% waste thanks to milk recovery
- Angled pitcher support available as an accessory, useful for achieving a finer texture

WHAT ABOUT ENERGY PERFORMANCE?

Induction technology with optimised energy consumption

Standby consumption: 10 Wh

The precise amount of milk needed for every recipe

OPERATIONAL BENEFITS:

Fully automated milk frothing with consistent results

More efficient use of barista time

Automatic 8–10 minute sanitising cycle, no supervision needed

Faster service during peak hours with simultaneous tasks

Parallel milk preparation and coffee extraction

Reduced dependency on operator experience

HOW DOES IT INTEGRATE INTO THE VENUE?

- Compact dimensions: 215 × 405 × 413 mm
- Weight: 15.5 kg
- 4.3 inch touch display for recipe, temperature and volume configuration
- Convenient management of two different milk or plant based beverages, allowing easy switching during service.
Cross contamination between different milk types is not guaranteed
- Automatic milk empty detection
- Aesthetic customisation options with panels and LED lighting

IN WHICH CONTEXTS CAN IT BE USED?

Milky is designed for professional environments where consistency, workflow efficiency, and reduced operational effort are essential, especially in high volume service contexts.
